In vitro MSC/Breast cancer cell fusion

MSC/Breast fusion cells grow faster in animal models

Conclusions

1. Luminal B breast cancer is the most prevalent among Colombian women;
2. Luminal tumors present differential gene expression profiles based on the ancestry fraction of the patient;
3. Ancestral fraction of luminal B breast cancer patients correlate with differential infiltration of cells into tumors
3. Differential cell infiltration is correlated with and may affect tumor size in luminal B breast cancer, especially, as suggested by our results, mesenchymal stromal cells
